

AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

Summary

ABSTRACT

~~In a~~ A device for screwing caps onto containers with several closing heads revolving on a closed track, each of which ~~[closing heads]~~ has closing head having a controllable gripping tong, a control unit for the opening position and the closed position of the corresponding gripping tong, ~~which revolves with each control unit revolving along with this, is and~~ allocated to every gripping tong. The revolving control units can be reversed in direction between the opening position and the closed position by ~~means of~~ stationary stops. ~~By this means~~ In this manner, a precise and rapid reversal of the gripping tongs, as well as a simple adjustment of the opening- and closed position, is made possible without a stationary control curve
